

Hazaribagh Store — Business Dashboard

A monthly read of sales and stock across all 16 measures — how much the store really earns, where the profit leaks, and what to fix. Jharkhand

 Sales: Sep 25 – Jul 26 (11 mo)

 Stock file: SOH_Hazaribagh.xlsx

 7,094 bills · 19,141 pieces · ₹3.16 Cr

 16 staff · 3,643 known customers

THE HEADLINE

A busy store that sells well — but keeps little profit

Over 11 months the store sold **₹3.16 Cr**. After the cost of goods and running costs it kept about **₹7.2 L — roughly 2%**. Every item is bought at about **63% of its tag price**, so at full price the margin is ~37% — but the average discount of **18%** pulls the realised margin down to **22%**.

REPEAT CUSTOMERS

40%

Drive 66% of tracked sales

The one-line story: the store earns a healthy ~37% at full price, but discounting and running costs leave only 2% at the bottom. **Profit is given away at the till and tied up in slow stock — not lost at the counter.**

WHAT'S COVERED

- 1 · Staff productivity → §6

2 · Average bill value → §6

3 · Repeat / new customers → §6

4 · Month-on-month P&L → §2

5 · Dead stock → §5
- 9 · Out-of-stock items → §5

10 · Item-wise → §4

11 · Gender-wise → §4

12 · Top 20 brands → §3

13 · Size analysis → §4

6 · Fast-moving stock → §5

14 · Accessories → §4

7 · Stock turnover → §5

15 · Discount → §2

8 · Ageing → §5

16 · Margin → §2 & §3

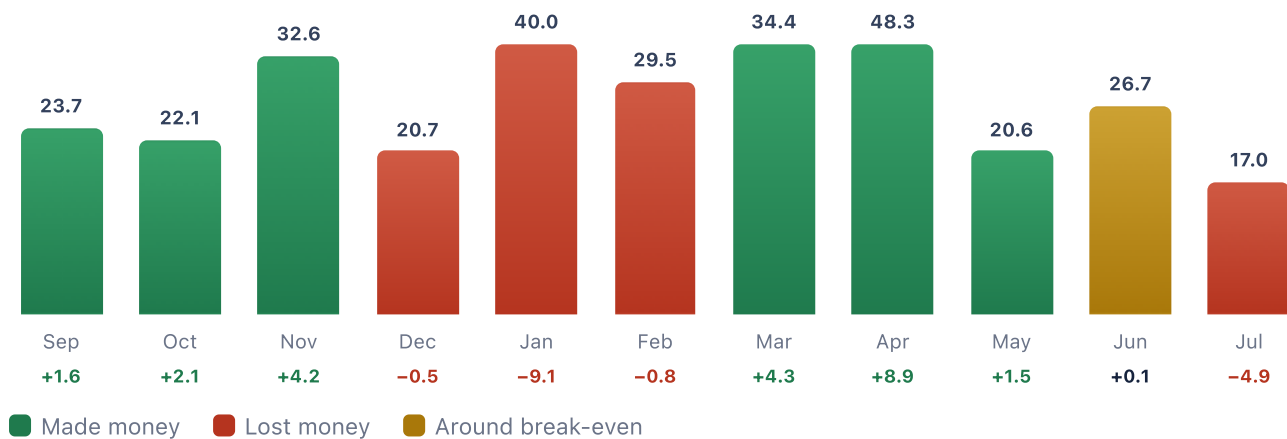

1 · SALES THROUGH THE PERIOD

Which months made money — and which gave it back

The store runs at roughly **₹17.0 L–₹48.3 L a month**. The colours below show whether each month actually made or lost money after all costs — the number under each bar is the profit or loss.

Monthly net sales (₹ lakh) — green = profit month, red = loss month

Bar height = sales. Colour & number = profit/loss that month after cost of goods and running costs.

Best month Apr 26: +8.9 L. Weakest Jan 26: -9.1 L. The good months carry the weak ones — the biggest swing factor is how deep the discounting goes.

2 · THE MONEY — PROFIT, DISCOUNT & MARGIN (#4, #15, #16)

Discount is the biggest lever on profit — past 37% off, the store sells at a loss

Goods cost about **63% of the tag price**, so any discount above **37%** sells the item **below cost**. Keep 37% as the hard ceiling for normal selling.

Month-by-month profit & loss (₹ lakh)

Cost of goods estimated from the stock file (every sold item matched to its cost). Running cost = 7% of sales + rent ₹2.2 L + electricity ₹1.0 L + misc ₹0.4 L per month.

MONTH	NET SALES	DISCOUNT	COST OF GOODS	GROSS PROFIT	RUNNING COST	PROFIT / LOSS
Sep 25	23.7	8%	16.8	6.9	5.3	+1.6
Oct 25	22.1	5%	14.9	7.2	5.1	+2.1
Nov 25	32.6	9%	22.6	10.0	5.9	+4.2
Dec 25	20.7	19%	16.1	4.5	5.0	-0.5
Jan 26	40.0	40%	42.8	-2.7	6.4	-9.1
Feb 26	29.5	22%	24.7	4.8	5.7	-0.8
Mar 26	34.4	9%	24.1	10.3	6.0	+4.3
Apr 26	48.3	6%	32.4	15.9	7.0	+8.9
May 26	20.6	6%	14.1	6.5	5.0	+1.5
Jun 26	26.7	18%	21.1	5.5	5.5	+0.1
Jul 26	17.0	34%	17.1	-0.2	4.8	-4.9
11 months	316	18%	247	69	62	+7

The 37% rule. Because goods cost ~63% of the tag, any discount above **37%** sells below cost. Go beyond it only for stock you have decided to dump.

What discount cost: ₹69.0 L was given away in discount over 11 months — against a gross profit of ₹68.9 L. Cutting average discount by **5 points** is worth roughly **₹17.2 L a year**, straight to profit.

3 · BRANDS (#12, #16)

Which brands actually make money

Two questions per brand: how much it sells, and how much it keeps after discount. Watch the **margin** column — big sales with low margin means cash tied up for little profit.

TOP 20 BRANDS (BY SALES)	PIECES	SALES ₹L	DISCOUNT	MARGIN	STOCK ₹L	VERDICT
U.S. Polo	741	18.6	27%	10%	14.4	Big, thin profit
Allen Solly	1,089	17.8	34%	1%	22.6	Big, thin profit
Van Heusen	742	16.6	29%	7%	31.3	Big, thin profit
Louis Philippe	589	14.9	30%	4%	20.2	Big, thin profit
Killer	780	13.6	35%	-4%	13.3	Selling at a loss
Levis	486	10.6	36%	-4%	11.1	Selling at a loss
Arrow	400	7.7	31%	-2%	21.4	Selling at a loss
Fw	324	7.1	6%	32%	0.0	Star — grow it
Mufti	342	6.9	38%	-9%	4.5	Selling at a loss
Jay Ambey	127	5.9	5%	41%	3.7	Star — grow it
Plazer	202	5.5	4%	38%	2.8	Star — grow it
Peter England	317	5.5	31%	5%	12.0	Thin profit
Yes Mam	195	5.2	5%	35%	3.8	Star — grow it
Citrus	318	4.0	3%	28%	6.2	Star — grow it
Ashmita Bq	167	3.8	6%	35%	2.7	Star — grow it
Hyphen	186	3.4	2%	33%	3.1	Star — grow it
Jockey	899	3.4	9%	23%	3.5	Healthy
Khushaal	67	3.3	3%	39%	2.8	Star — grow it
Blackberry	152	3.1	23%	7%	0.0	Thin profit
Blackberrys	97	3.1	15%	20%	4.7	Healthy

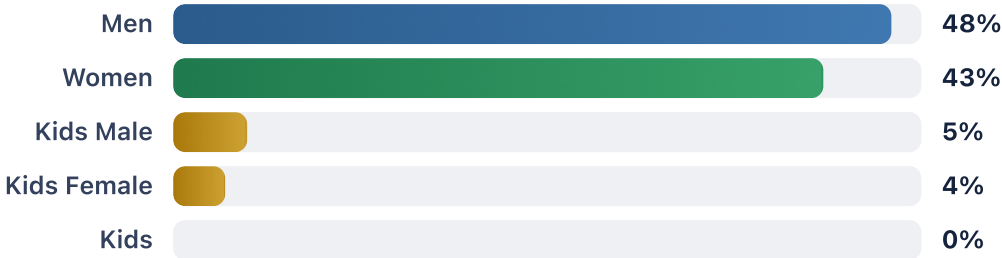

Brand codes merged where the same brand appears under several names. Margin is after discount, using each item's cost from the stock file.

The lesson: the high-margin earners here are **Fw, Jay Ambey, Plazer, Yes Mam, Citrus, Ashmita Bq**. Give them more space and stock; buy the low-margin, heavily-discounted brands more tightly.

Where the sales and the margin come from

Who the store sells to

Share of money taken, by section.

TOP ITEMS	PIECES	SALES ₹L	AVG PRICE	DISCOUNT	READ
Saree	2,167	48.6	₹2,242	5%	Full price
Shirt	2,314	39.3	₹1,697	27%	Heavily discounted
Jeans	1,795	36.1	₹2,014	30%	Heavily discounted
Kurti Set	1,509	32.0	₹2,124	7%	Full price
T-Shirt	1,697	18.3	₹1,081	24%	Heavily discounted
Trouser	877	15.7	₹1,788	28%	Heavily discounted
Suit	228	14.1	₹6,195	10%	Some discount
Jacket	518	13.7	₹2,637	34%	Heavily discounted
Salwar Suit	386	9.8	₹2,533	5%	Full price
Blazer	228	9.3	₹4,092	26%	Heavily discounted
Lehenga	94	7.7	₹8,238	5%	Full price
Sweatshirt	465	7.7	₹1,652	31%	Heavily discounted

Sizes — fastest movers (#13)

Top sizes by pieces sold; % = how much of that size's stock has sold.

- **Men:** M (50%), L (44%), FREE SIZE (44%), XL (41%), 32 (41%), 40 (35%)
- **Women:** FREE SIZE (47%), XL (69%), L (38%), M (42%), XXL (28%), S (41%)
- **Kids Male:** 12 (49%), 14 (52%), 10 (38%), 8 (39%), 6 (40%), FREE SIZE (31%)
- **Kids Female:** FREE SIZE (43%), 36 (41%), 26 (27%), 34 (34%), 24 (22%), 30 (28%)

Accessories (#14)

Accessories sold **₹9.1 L** over 11 months on **₹6.8 L** of stock — a healthy add-on business. Push them at the counter to lift the bill with little risk.

How much stock, how old, and how fast it turns

The store holds ₹3.81 Cr of stock (₹6.01 Cr at tag price). At the current selling speed that is about **17 months** of stock — a healthy clothes shop carries 3–4 months. Only **20%** of stock value is in styles that have sold even once.

STOCK TURNOVER (#7)

0.7x/yr

~17 months to sell · target 3–4x

AGING STOCK, 6 MO+ (#5, #8)

₹0.40 Cr

Not sold in 6+ months

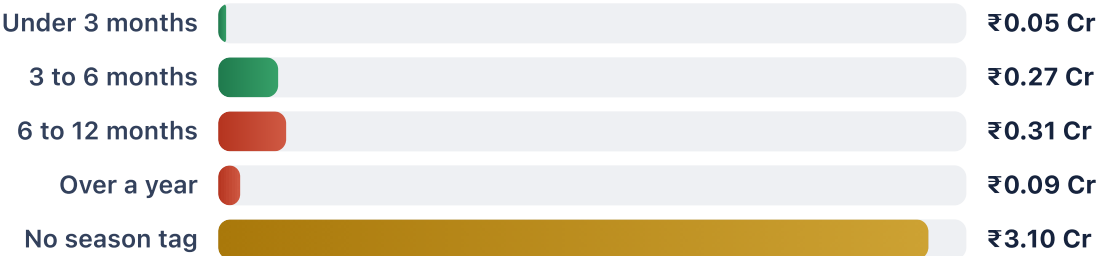

OUT OF STOCK ON FAST ITEMS (#9)

0

Sold recently, now at zero

Stock by age (at cost) (#8)

Green = fresh, give it time. Red = old, clear it.

Where the slow money sits (#5)

Stock not sold in the period, by item: **Shirt ₹55.1 L · Jeans ₹45.6 L · T-Shirt ₹30.2 L · Trouser ₹25.1 L · Suit ₹23.8 L · Kurti Set ₹20.5 L.**

The real problem: wrong mix (#6, #9)

The store is **overstocked overall yet out of stock on 0 fast items** that sold recently and are now at zero. Money is locked in slow styles while fast ones run dry — a buying & replenishment problem, not a quantity one.

The customer base and the staff scorecard

AVERAGE BILL (#2)

₹4,449

2.7 pieces per bill

REPEAT CUSTOMERS (#3)

40%

Drive 66% of tracked sales

BILLS WITH A PHONE

96%

4% not captured

Customers: 3,643 customers are known by phone, and the top 5% bring **27%** of sales. Phone capture is strong — use it for WhatsApp reminders and a VIP perk for the top 5%.

Staff — sales and price held (#1)

Note the last column: some staff hold 93% of the tag price, others 55%. Part is the section they work, but it is also a coaching gap worth real money.

SALESPERSON	SALES ₹ L	BILLS	AVG BILL	PRICE HELD
Punam Kumari	32.9	794	₹4,143	93%
Sunny Sonar	30.9	895	₹3,456	74%
Niraj Rajak	27.4	651	₹4,209	75%
Anjali Kumari	25.5	826	₹3,084	90%
Dilip Rajwar	25.2	717	₹3,512	77%
Ruby Kumari	23.2	754	₹3,073	92%
Prity Kumari	21.6	868	₹2,493	90%
Poonam Rana	21.3	700	₹3,044	90%

16 staff in total. Measure each on **price held**, not just sales value. (Sales-per-hour isn't possible — no attendance/targets in the data.)

7 · WHAT WE COULD NOT MEASURE — AND WHY

Being straight about the limits

- **True conversion rate — not possible.** No footfall / door-counter data exists, so we show repeat vs new customers, not sales ÷ walk-ins.
- **Profit is a close estimate.** The sales export has no cost column, so cost of goods is taken from the stock file (every sold item matched to its cost). Running cost uses the 7%-of-sales + rent/power/misc figures in the config.
- **Only 11 months of sales** are in the data, so "dead stock" means not sold in that window; fresh stock is shown separately by age.
- **No colour analysis.** The "Colour" field in the sales export is a price band, and the stock file has no colour — so we can analyse sizes, not colours.

8 · WHAT TO DO — BIGGEST PROFIT FIRST

The priority moves

1 Cap the discount — never sell below cost

Set a firm ceiling of **37% off** for normal selling. Plan the clearance so it does not repeat Jan 26's loss.
↳ Biggest lever — a 5-point cut in average discount ≈ ₹17.2 L a year.

2 Fix the brand & product mix

Buy the low-margin, heavily-discounted brands more tightly; give the high-margin stars more space and stock.

↳ Same sales, more profit; less cash tied in slow stock.

3 Clear the aging stock

Run a planned exit for the ₹0.40 Cr not sold in 6+ months, within the 37% ceiling.

↳ Frees cash and shelf space; lifts stock-turn from 0.7× upward.

4 Buy the right mix, not more stock

Reorder the 0 fast items now out of stock, and shorten the buy on slow sizes.

↳ Recovers lost sales without adding to the overstock.

5 Capture every customer, then use the list

Get the phone number on every bill (now 96%). Send WhatsApp reminders to repeat and lapsed customers.

↳ Near-zero cost; repeat customers drive 66% of sales.

6 Manage by this dashboard every month

Track profit, discount, margin, stock-turn, dead stock, out-of-stock, repeat rate and price-held — refresh it monthly.

↳ Turns this study into an everyday habit.

How this was prepared. Built by the *store-dashboard* skill from this store's sales and stock-on-hand exports (Sales_Hazaribagh.xlsx, SOH_Hazaribagh.xlsx). Figures computed directly from the files; bill fields filled down; carry-bags and the stock total row removed; brand codes merged; every sold item matched to its cost in the stock file to estimate margin and profit.

Honest caveats. Cost of goods and profit are estimates (no cost column in sales); running costs use the 7%-of-sales + rent/power/misc figures in the config. Dead stock = not sold in the 11 months of data. A true conversion rate needs footfall data, which does not exist here.
