

Vaishnavi — Deoghar · Stock Data Check

While analysing the stock-on-hand file, a few data problems came up that make the numbers hard to trust. They're all fixable. This note lists exactly what was found, with the actual records, so your team can correct them.

 File: VAISHNAVI DEOGHAR 12-06-2026 SOH.xlsx

 8,805 in-stock items checked

 Full lists in the attached Excel

AT A GLANCE

Three things to fix in the stock data

COST HIGHER THAN MRP 24 items Impossible — cost-field errors	SAME ITEM, TWO SEASONS 3,007 34% of items differ across the 2 sheets	STRUCTURE PROBLEMS 2 sheets + a total row buried in the data
---	---	---

Why this matters: wherever cost is wrong, the profit/margin for that item is wrong too; and when an item's season is recorded two different ways, you can't reliably tell how old the stock is — which is exactly what drives markdown and dead-stock decisions. None of it is fatal, but it shows the data isn't being checked as it goes in.

ISSUE 1

24 items have cost recorded higher than MRP

An item can't cost more than its selling price. These are clearly data-entry errors in the cost field — mostly **Stride t-shirts** and **Van Heusen jeans** (where cost is entered ~75% above the price tag). Every one of these shows a fake loss until corrected.

ITEM	BRAND	SIZE	BARCODE	MRP	COST ENTERED	GAP	QTY
Jeans	Van Heusen	82	8909045599857	₹2,499	₹4,375	₹1,876	1
Jeans	Van Heusen	86	8909045599864	₹2,499	₹4,375	₹1,876	1
Jeans	Van Heusen	82	8909045832879	₹3,799	₹4,434	₹635	1
Jeans	Van Heusen	86	8909045685284	₹3,799	₹4,434	₹635	1
Jeans	Van Heusen	92	8909045599871	₹2,499	₹2,917	₹418	1
T-Shirt	Stride	M	6570283791352	₹1,699	₹2,090	₹391	1
T-Shirt	Stride	M	6570283815195	₹1,699	₹2,090	₹391	2
T-Shirt	Stride	M	6570283815201	₹1,699	₹2,090	₹391	2
T-Shirt	Stride	L	6570283815232	₹1,699	₹2,090	₹391	1
T-Shirt	Stride	XL	6570283815256	₹1,699	₹2,090	₹391	2

ISSUE 2

The same item carries a different season in the two sheets

The workbook has two sheets listing the same 8,805 in-stock items. For **3,007 of them (34%)**, the "Season" — which tells you how old the stock is — does not match between the sheets. Here's what's behind those 3,007:

Why the seasons don't match (3,007 items)

The takeaway: roughly a third are harmless formatting differences, but **over 1,000 items have a date instead of a season**, and another 640 are blank on one side. Together that means the store cannot automatically sort stock by age — and ageing is what drives markdowns and clearing dead stock. The full item-by-item list (with both season values) is in the attached Excel.

ISSUE 3

Totals and dead rows are mixed into the live data

- **Two sheets for the same stock.** One sheet lists the full catalogue (33,383 rows — including 24,576 items with zero stock), the other lists only the 8,805 items actually in stock. Keeping both, with different season labels, is how the mismatch above creeps in.
- **A grand-total row is buried inside the data** — a row with no barcode carrying the whole-store total (13,375 pieces, ₹1.80 Cr). If anyone sums the quantity column without spotting it, the total is double-counted.
- **Zero-stock items sit in the same list as live stock** — fine for a catalogue, but it inflates counts and slows down anyone reading the file.

What to do: none of this needs a big project. The lasting fix is for the billing/stock system to keep **one record per item** with a **single, validated season** and a **cost that can never exceed MRP** — so these errors can't be entered in the first place. Until then, the 24 cost errors can be corrected today, and the season field standardised to one format.

About this note. Prepared as a companion to the Vaishnavi (Deoghar) store analysis. All findings are taken directly from the stock-on-hand file dated 12 June 2026. The complete lists — all 24 cost-above-MRP items and all 3,007 season mismatches with both values side by side — are in the accompanying file **Vaishnavi-SOH-data-errors.xlsx**.
