

JSL Store — What to Buy for Winter

A simple plan for the winter season (October 2026 to February 2027): what to buy, how much, and how to pay for it — worked out from the store's own stock list and sales.

Sales read: June 2026 · 595 bills

Stock as on: 30 June 2026

27,695 items in stock · ₹4.0 Cr

All buying done by: October 2026

THE HEADLINE

The store already has too much stock — so buy less, but buy the right winter things

The shop is full. It is holding **more than a year's worth of stock**, and a big part of it is **last winter's clothes that never sold**. So winter is not the time for a big new order. It is the time to **clear the old stock**, and spend a small, careful budget on the few things that really sell in winter — mostly **festival and Indian wear**, plus a small **winter-clothing range**.

STOCK IN THE SHOP (AT COST)

₹4.0 Cr

₹6.3 Cr at MRP · 27,695 items

JUNE SALES

₹25.7 L

595 bills · average bill ₹4,320

HOW LONG THE STOCK WILL LAST

~15 months

A good clothes shop keeps 3–4 months

STOCK 6 MONTHS OLD OR MORE

₹1.44 Cr

Money getting stuck

LAST WINTER, STILL UNSOLD

₹1.26 Cr

Clear this first

SUGGESTED WINTER BUY

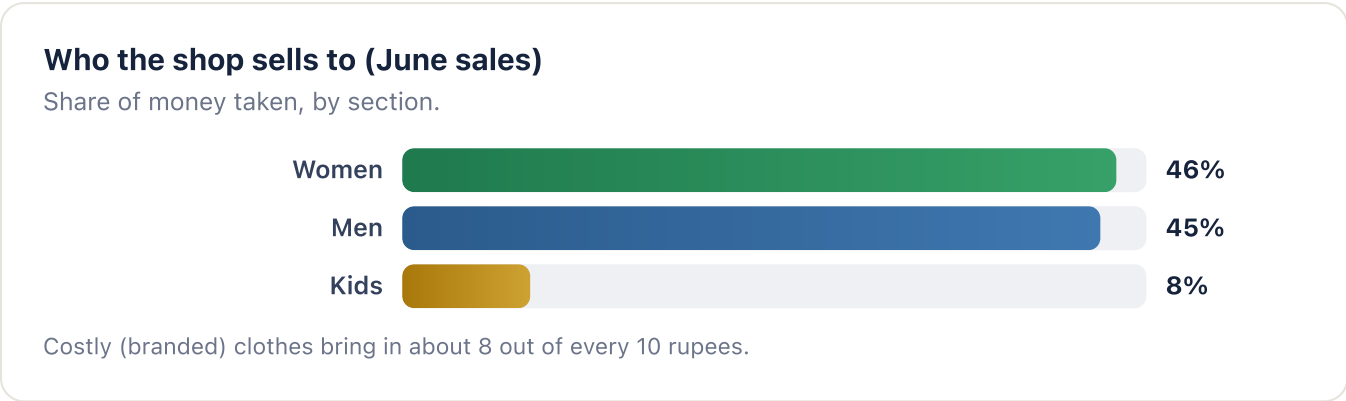

₹60–98 L

Small and focused · ₹78 L is the middle plan

The simple story: the shop is not short of clothes — it is short of **space and cash**. Clear the old stock first, then spend about **₹78 lakh** on fresh winter and festival stock. Do it this way and you go into winter with **newer clothes, more cash in hand, and less old stock** — not more.

Indian wear sells at full price. Men's jeans and shirts are on heavy discount.

Two kinds of clothes behave very differently in this shop. Knowing the difference tells you exactly where to put the winter money. The shop sells almost equally to women, men and kids.

WHAT IT IS	SOLD IN JUNE	MONEY	DISCOUNT GIVEN	WHAT IT MEANS
Sarees	242	₹4.2 L	4%	Best seller · full price → buy more
Shirts (men)	231	₹3.7 L	29%	Too much stock → buy little
Jeans (men)	141	₹3.0 L	31%	Too much stock → buy little
Kurti sets	122	₹2.6 L	3%	Full price → buy more
T-shirts	176	₹1.8 L	30%	Too much stock → buy little
Trousers	95	₹1.7 L	28%	Too much stock → buy little
Salwar suits	43	₹1.0 L	3%	Full price → buy more
Lehengas	10	₹0.85 L	4%	Wedding wear · big price → buy for the season

This is the most important thing in the report. Look at the discount column. Men's **jeans, shirts and t-shirts are sold at 28–42% off** — the shop has too many, so they go on sale and make almost no profit. But **sarees, kurti sets and salwar suits sell at just 3–4% off** — almost full price — and they sell faster. **Indian wear is where the profit is. Spend the winter money there.**

Buy common sizes only. Most sales are in the middle sizes: **waist 30 to 34** for jeans and trousers, and **M, L, XL** for shirts and t-shirts. Very small and very large sizes get stuck and end up as old stock — buy very few of those.

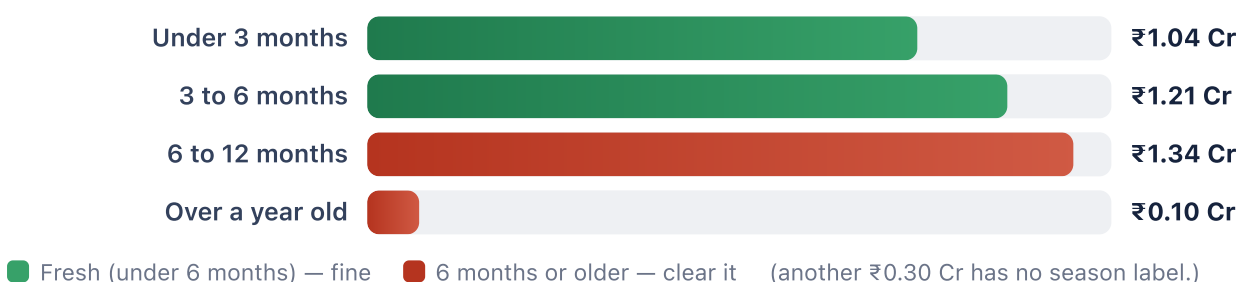

The shop is holding more than a year of stock

This is why we must be careful with new buying. The shop is carrying about **15 months of stock**. A healthy clothes shop, where fashion changes fast, keeps only **3 to 4 months**. Too much stock means cash is stuck on the shelves and clothes slowly go out of season.

₹1.44 crore of the stock is already 6 months old or more. And **₹1.26 crore of that is last winter's clothes** — still sitting unsold, about to go into a second winter. This is the money to free up first.

Stock by age (₹ crore, at cost)

Green = fresh, give it time. Red = old, clear it.

Half the stock is fresh and fine — **₹2.25 crore is under 6 months old**. The worry is the other side: **₹1.44 crore is getting old**, led by last winter's leftovers. Winter is the right time to clear it (festival and sale crowds are buying), and the cash it frees pays for the new winter stock.

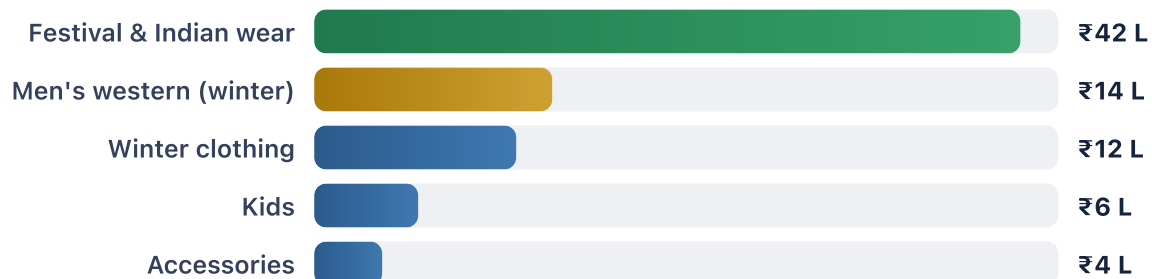

Buy about ₹78 lakh of fresh stock — mostly festival and Indian wear

This is the plan in numbers. Buy **₹78 lakh worth (at cost)** in the middle plan — you can go as low as **₹60 lakh** or as high as **₹98 lakh** depending on how strong you expect the season to be. Here is where every rupee should go, most important first.

WHAT TO BUY (MOST IMPORTANT FIRST)	MONEY (COST)	SHARE	WHY
1. Festival & Indian wear push hard	₹42 L	54%	Fresh sarees, kurti sets, salwar suits, lehengas, gowns, and wedding wear (suits, sherwani, Nehru jackets). Full price, and the festive + wedding season is the best time for it.
2. Men's western — winter styles only a little	₹14 L	18%	Only full-sleeve shirts, dark/thick jeans and light jackets, in common sizes. The shop already has plenty of the rest — sell that down.
3. Winter clothing small & smart	₹12 L	15%	Sweaters, sweatshirts, jackets, cardigans, thermals, mufflers, shawls, caps, and women's & kids winter sets. Keep it small — last winter's lot was over-bought.
4. Kids	₹6 L	8%	Festival Indian wear and winter sets for children.
5. Accessories & innerwear	₹4 L	5%	Stoles, caps, belts, purses, innerwear — small add-on sales, low risk.
Total winter buy (middle plan)	₹78 L	100%	About ₹1.2 Cr at MRP

Where the ₹78 lakh goes

More than half goes to festival and Indian wear, because that is where the profit is.

Why so little winter clothing? The shop is *still* holding about 1,650 winter pieces from last year (sweatshirts, jackets, winter tops), and most are unsold. That tells us this is not a heavy-winter town — so don't over-buy heavy winter wear. Re-display the plain ones that don't look dated (thermals, simple sweaters, mufflers, shawls), and buy only a small fresh, fashionable lot on top.

When to buy — finish by October

Stock must be on the floor **before** each rush. The big dates this year are around **Dussehra (20 Oct)**, **Diwali (8 Nov)** and **Chhath (15 Nov)**, then the **wedding season** and the **cold months (Dec–Jan)**. So the buying runs July to October.

MONTH	WHAT TO DO
July	Place the festival and winter orders now (they take time to arrive). Start clearing last winter's old stock.
August	First new stock arrives and goes on display. Keep clearing the old.
September	Full festival and Indian wear on display, ready for Dussehra. Re-order the fast sellers (sarees, kurti sets).
October	Winter clothing fully on the floor for the cold and wedding rush. All buying finished this month — after this, only top up what sells.

4 • HOW TO PAY FOR IT

Clear the old stock — it pays for the new

You do not need extra money for this plan. The cash is already sitting on the shelves as old stock. Sell it during the festival and sale crowds, and it more than covers the new winter buy.

OLD STOCK TO CLEAR

₹1.44 Cr

₹2.30 Cr at MRP

CASH IT CAN FREE

₹1.1–1.3 Cr

After clearance discounts

NEW WINTER BUY

₹78 L

Much less than the cash freed

The result: total stock goes **down** (from ₹4.0 Cr towards ₹3.2 Cr), cash goes **up**, and the shop looks **fresher** for the festivals. You are swapping old, stuck stock for new stock that sells — not adding more.

Clear the biggest blocks of old stock first — these are last winter's leftovers:

- **Men's shirts** — about ₹27 lakh of old stock
- **Sarees** — about ₹18 lakh
- **Trousers** — about ₹16 lakh · **Jeans** — about ₹15 lakh
- **Formal suits** — about ₹10 lakh · **Kurti sets** — about ₹9 lakh

5 • WHAT TO DO NOW

Five simple steps

1 Clear the old stock first

Start a clearance now, before the festivals, on the ₹1.44 crore of old stock — last winter's clothes first. Use the festival and sale crowds to turn it back into cash.

↳ **Frees ₹1.1–1.3 crore of cash and empties the shelves for new stock.**

2 Spend that money on festival & Indian wear

Put more than half the winter budget into fresh sarees, kurti sets, salwar suits, lehengas and wedding wear. This is what sells at full price in this shop.

↳ **Best profit, and the festive + wedding season is the right time.**

3 Buy only a little men's western

The shop already has too many jeans, shirts and t-shirts. Buy only fresh winter styles (full-sleeve shirts, dark jeans, light jackets) in common sizes (waist 30–34, M/L/XL). Let the rest sell down.

↳ **Stops the over-stock problem from getting bigger.**

4 Keep the winter-clothing order small

Last winter's sweaters and jackets are still here. Re-display the plain ones, and buy only a small, fashionable fresh lot. Don't over-buy heavy winter wear.

↳ **Avoids repeating last year's left-over winter stock.**

5 Don't let total stock grow

For every new piece that comes in, one old piece should go out (sold or cleared). The aim is to end winter with **less** stock than today — about 11 months' worth, not 15.

↳ **More cash, fewer markdowns, a fresher shop.**

How this was prepared. Built from two files from the store: the **June 2026 sale report** (595 bills) and the **stock-on-hand list as on 30 June 2026**. All figures are worked out directly from those files. Money is shown at cost unless "MRP" is written. Shopping carry-bags (about 31,000 packaging pieces) were left out of the clothing numbers, and a stray total row in the stock file was removed before counting.

Honest note on the numbers. This uses **one month of sales (June — a slow summer month)** and one stock list. What is **solid**: what sells well, the right sizes, the old-stock problem, and the full-price-vs-discount story — these do not change. What needs a check: the **exact size of the budget** (the ₹60–98 lakh), because winter is the busy season and June is quiet. **Please check it against last year's October-to-February sales** in your billing system and adjust up or down. Also note: stock comes into this shop **by transfer from the head-office godown**, so treat this as the shop's **winter order to head office**.
